

Seminar
Why Is Everybody Always Picking On Us?

Are We Born Prejudiced?
Are We Born to Bully?
Yes, we are! –

**According to the Centre for Infant Cognition
At the University of British Columbia***

This seminar will present a groundbreaking, innovative program to address this innate root cause of bullying in order to prevent this individual and social disorder from occurring since there is the possibility that this prejudicial inborn genetic heritage could by design set in motion bullying on the battlefield.

Terrence Webster-Doyle, MA, PhD is a prolific writer having written 70 internationally acclaimed, award winning literary works for young people and adults that focus on the issue of achieving peace through understanding what prevents it – conditioned thinking.

Jean Webster-Doyle MAPTT, is the founder and President of the Atrium Society. She has traveled worldwide educating people about the causes of conflict in the conditioned way we think. She is a Master Teacher and Trainer in Youth Peace Literacy and Martial Art for Peace Mental Self-Defense.

Dr. Webster-Doyle's book, "Why is Everybody Always Picking on Us?" explores the roots of prejudice. I don't think I've seen another book like it. How wonderful if this book could be used in one's social studies classroom! I have learned where prejudice begins, how it is created, how it is perpetuated, and how it can be resolved. This book looks at stereotypes, bigotry, discrimination, scapegoating, racism, and more. It is a wonderfully comprehensive manual for young people and adults alike on understanding our conditioning and the root of prejudice.

- American Pride Through Education

**University of British Columbia Centre for Infant Cognition states that bullying is a gene-linked behavior causing "social stratification" – a result of the victim's DNA.*
